water resources engineering mays solution manual water resources engineering mays solution manual water resources engineering mays solution manual Composite Wound Healing Markers: An International Biomarker Consortium. Wound healing is a continuous process that requires the immediate monitoring of the rate and extent of healing. There is an urgent need for clinical tools that monitor the integrity of the wound epithelium as a signal of the patient's readiness for an epithelial graft. To address this need, a multi-institutional Biomarker Consortium was established under the auspices of the wound care product innovation committee of the Association for Wound Healing Sciences (AWHS) as part of the Innovative Technology Alliance (ITA) program. The goal of this work was to develop quantitative and qualitative wound healing markers that could be applied topically to the wound bed. The consortium is composed of 12 pharmaceutical partners, eight hospitals and clinics, and one academic partner with research experience in wound healing. The initial focus of the collaborative development of the
